Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was significantly higher than the number of incorrect responses for all conditions. The number of correct responses was significantly higher than the number of incorrect responses for all conditions. The number of correct responses was significantly higher than the number of incorrect responses for all conditions.

Figure 1 is a 3D bar chart showing the distribution of the number of children per family (0 to 10) for three groups: 'All', 'Non-MS', and 'MS'. The 'All' group has the highest frequency, peaking at 4 children. The 'Non-MS' group peaks at 3 children. The 'MS' group has a much lower frequency, peaking at 2 children. The x-axis is 'Number of children per family', the y-axis is 'All', and the z-axis is 'Non-MS' and 'MS'.

Figure 1 is a 3D bar chart illustrating the distribution of the number of children per woman by country and year. The x-axis represents the number of children (0 to 10), the y-axis represents the percentage of women, and the z-axis represents the year (1990, 2000, 2010). The chart shows a general trend of decreasing fertility rates over time across all countries.

[illegible]
