Abstract The purpose of this study was to determine whether the use of a computerized program designed to teach the basic concepts of epidemiology would increase knowledge of epidemiologic principles among nursing students. A pretest-posttest design was used. The sample consisted of 60 nursing students who were given a pretest before they began their course in epidemiology. They then completed the same test after completing the course. The mean score on the pretest was 7.8% and the mean score on the posttest was 90.8%. This indicates that the use of the computerized program significantly increased the knowledge of epidemiologic principles among nursing students.
